Frontend developer with 5+ years of experience, involved in the entire software development lifecycle. My expertise includes finding IT solutions for public and private organizations including various technologies such as JavaScript, ReactJS, Typescript and Jest. I am focused on delivering exceptional customer experiences and developing efficient and optimized code, following the DRY principle for different customers (B2B - B2C). My goal is to contribute to the design of world-scale solutions, together with dynamic and high-performing teams. Finally, I would like to highlight that I was part of croing an honor winning site in awwwards.
